Gregory Agapov

Engineering Team Lead

Hands-on Team Lead with 15+ years in software engineering and 5+ years of direct people management across teams of 6-8. Builds products from MVP to scale: owns the backlog, planning, and releases under Scrum/Scrumban, and still designs architecture and writes microservice optimization code. Currently leading VK's Donations product team — 8 direct reports across backend, frontend, mobile, and QA.

CAREER

Experience

VK

Team Lead, Donations Product Team — Communities Business Unit

Jan 2026 — Present

- Lead the Donations product team with 8 direct reports: 3 backend, 2 frontend, 1 iOS, 1 Android, 1 QA.
- Own and prioritize the team backlog, independently and with the product manager; run quarterly, sprint, and release planning under Scrum/Scrumban.
- Design the service architecture and write microservice optimization code myself, driven by per-method RPS, related query load, and memory and CPU consumption.
- Within one quarter, delivered the Donations rebrand and launched Donations in VK profiles, where the flow had previously been available only in Communities.
- Aligned the product backend team with a dedicated migration team to accelerate the Donations service move from monolith to microservices.
- First 3 weeks after the rebrand release: +3,276 creators with Donations enabled (+3.96%), +469 monetizing creators (+1.4%), +880,743 ₺ in donations turnover (+0.37%), +3,578 donations (+0.55%).

Team Lead, Social Commerce Platform Team

Apr 2025 — Dec 2025

- Led a platform team of 8 direct reports and coordinated the goods-scaling program across 3 teams.
- Owned and prioritized the platform team backlog, independently and with the product manager; ran quarterly, sprint, and release planning under Scrum/Scrumban.
- Lifted the goods cap in VK Communities from 20K to millions through load testing and a coordinated release.
- Launched the 40-seller Ozon integration: ~3M imported products and ~1M AdBlogger offers.
- Hit the recommendation-system migration deadline tied to the Hadoop shutdown and worked through an incident without losing a significant share of traffic.
- Increased VKUI coverage on iOS from 35% to 64% and reached 84% on Android, leading frontend unification across iOS, Android, and web.

Team Lead, Mentoring Project

Dec 2022 — Mar 2025

- Led a 6-person cross-functional team (backend, frontend, QA, design, analytics) and shipped the MVP of the company's first mentoring platform on schedule.
- Owned and prioritized the backlog, independently and with the product manager; ran OKR, sprint, and release planning under Scrum/Scrumban.
- Designed the platform architecture on DDD, which let the team iterate quickly on product ideas.
- Staffed the company's first pilot entirely with mentoring-program participants who later moved into full-time roles.
- Mentored 2 backend engineers inside the program.

Team Lead, Performance Review Project

Apr 2021 — Dec 2022

- Took over the Performance Review platform — 60K users with two high-load windows per year — during its reset and aligned a one-year stabilization plan with the business.
- Owned and prioritized the backlog, independently and with the product manager; ran OKR, sprint, and release planning under Scrum/Scrumban.
- Owned the platform architecture and technical decisions.
- Built and grew a 7-person cross-functional team that established stable execution.
- Mentored a backend engineer who moved into a full-time role on the project.

Senior Developer, Organization Structure Project

Apr 2020 — Apr 2021

- Independently designed, built, and launched a new internal service from scratch on .NET, Angular, Postgres, and microservices — owning backend, frontend, and rollout.
- Worked directly with business and analysts, challenged unclear requirements, and chose workable implementation paths.

Middle Developer, Performance Review Project

Apr 2019 — Apr 2020

- Developed the Performance Review platform, the in-house task tracker, and related feedback systems while continuing to grow through internal training.

Neotech (Paravan 2000)

Senior Developer, GIS Projects

Dec 2013 — Mar 2019

- Built and customized solutions on General Electric Smallworld GIS for major telecom customers across Russia and the CIS — MTS, MGTS, TAT Telecom.
- Reverse-engineered client systems without source-code access, preserving the ability to keep developing in a constrained enterprise environment.
- Attended international GE Smallworld developer conferences in the UK, Italy, and the Netherlands; earned the GE Smallworld GIS Certified Developer certification.
- Developed extensions in Magic and Spatial DB plus client-side features in Java, JSP, JavaScript, jQuery, and Mustache.

CINIMEX

Middle Developer

Nov 2012 — Jan 2013

IBM WebSphere

IBM Message Broker

ESQL

AISA IT-Service

Middle Developer, Railway Automation Project

Nov 2010 — May 2012

- Automated how Russian Railways (RZD) machinists interacted with route documentation through touch-screen terminals and digital forms (XFDL, IBM Lotus Forms).
- Built web services with Java EE (JSP, SOAP/WSDL) and optimized queries and stored procedures in IBM Db2.

Dashboard & Statusline for Claude Code

MIT licence

Non-commercial personal project

Author and maintainer — VS Code extension · Aug 2026 — Present

A developer tool that turns Claude Code's on-disk state into two surfaces: a dashboard over every transcript on the machine, and a status bar assembled from a template the user writes.

- 23-tab dashboard over every transcript on the machine — spend, subagents, workflow runs and usage limits, none of which the built-in terminal status line can see.
- Status bar built as a template: 45 placeholders, 11 ready-made presets and an editor with a live preview.
- About 20,000 lines of JavaScript across 33 modules with zero runtime dependencies, plus 9 commands, 16 settings and 4 sidebar views.
- Released on both storefronts under the MIT licence; reads only local state, with no telemetry.
